

Hosted VoIP

A hosted IP-based solution for merging telephony and Internet technology.

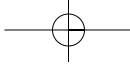

Comporium's Hosted VoIP Solution combines the technology of the Internet, the functionality of a PBX and the convenience of Centrex, without all the costs associated with a premise-based solution. This technology seamlessly merges your voice calls and data traffic onto a single managed connection. Since your converged voice and data is fully managed over our private network, you are guaranteed secure and controlled communication.

Comporium's Hosted IP Network

Benefits of Comporium's Hosted VoIP Solution:

- **Reduced Capital Expenditures**—reduce purchases, leases and management of expensive premise-based equipment
- **Reduced Operating Costs**—users have the ability to self-manage services, moves, adds and changes via an intuitive web interface
- **Centralized Control of Communications**—uniform feature functionality, regardless of location, reduces complexity of adding sites, users and features
- **Secure Network**—service is provided on a facilities-based, controlled, Quality of Service-enabled (QoS) network
- **Web-based Collaboration**—Turn features on and off and make phone calls all from your web interface
- **Mobility Options**—remote users have the opportunity to work on the road with all the feature functionality of working in the office
- **Single Provider**—one provider for all your communications services, all on one bill
- **Customized Web Portal**

Comporium's Web Portal allows users to configure and manage telephony services via web interface. Web access simplifies and speeds service configurations, as well as minimizes time and expense for moves, adds, and changes, providing control and flexibility of an on-site switch without the hardware and overhead. Some of the most convenient features that may be configured on the Web Portal are:

Toolbar

- **Efficient Interface** - provides an extremely simple yet efficient interface for configuring services and controlling calls. Only key services are displayed to facilitate quick access and avoid desktop clutter.
- **Call Control** - boasts an extremely user friendly interface and logical workflow that makes call management a breeze.
- **Caller Identification** - checks an incoming number against your Microsoft Outlook and Group Directory contacts so that you know who is calling and can more effectively manage the calls you take.
- **Call History** - keeps a record of calls missed, received and dialed so that you have a record of recent communications activity.
- **Services Integration** - Make and change all your telephone settings within Toolbar through easy to use configuration screens, without leaving your desktop applications.
- **Assured Reliability** - The Toolbar's design and network architecture ensures excellent reliability. The telephony controls are abstracted from the core of the communications network.

Broadworks Anywhere

BroadWorks Anywhere Solution

Seamless Productivity...

One Business Number
- One Number for all Phones

Universal Features
- All business features work across all phones

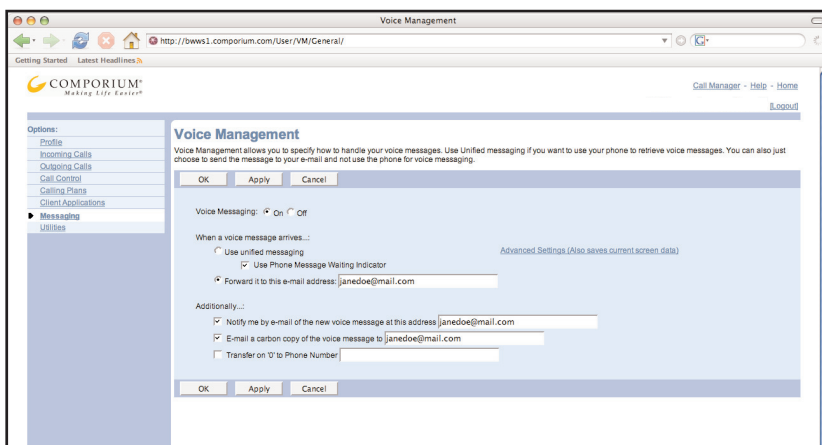

Independent of Mobile Network
- No relationship with Mobile Operator required

Amplifies Business Productivity
- Key requirement for many verticals

...In the Office...
...On the Road...
...In the Conference Room...
...In the Hotel...

- Only one business number is needed. Callers dial one number to reach the user's desk phone, cell phone and a soft phone simultaneously.
- Universal features. Users have access to all of their business features, regardless of which device they use to receive or make the call.
- Works independently of the user's mobile network. No relationship with the user's provider is required.
- Move calls among devices. Users enjoy voice call continuity by being able to move ongoing calls from one phone to another without hanging up.

Unified Messaging/Fax

- Fax and video messaging
- Message delivery to any specified e-mail account
- Message waiting notification delivered to the phone and to any specified mail or SMS account such as a cell phone
- Integration of messaging capabilities with services such as Call Back, Transfer, CommPilot Express, Voice portal, and Instant voicemail
